Aleksandar Miljkovic

web developer

Django

For web programming I use django frameworks in which I have experience about 2 years I had some small projects for college. I use mysql for bases. For the front hend i use css and js these are my skills and everything I can offer, thanks and I hope that I will have the opportunity to work with you.

Python

I've been studying pithon for 2 years at college, but I've learned more by reading books and watching videos online. I want to perfect this language even more. I've chosen it because it suits me with the way it works. I'm in programming a lot of time, that's something I want to do and where I find myself. My knowledge is, in my opinion, quite widespread since I want to be a full stack developer and I had to learn a lot of different programming languages.

JavaScript

Next to the pithon programming language. I also learned because it's necessary. I needed some mobility to pages that I could not do in css. I've been studying for a year and I'm pretty good on that question too.

Css/html5

Next to JavaScript. I also learn Html5 because this is necessary fot web developing, and we all know that learning html5 can't be done without css. It did not take a long time learning html and css, they can be learned quickly, but they should not be underestimated because they are the basis of every good site.

SKILLS

Python

JavaScript

Django

Html5

CSS
